Product 1

Flood map for planning

Your reference	Location (easting/northing)	Created
Unspecified	**443574/161376**	**12 October 2026, 10:08**

Your site is in flood zone 3

An area with a high probability of flooding from rivers or the sea.

This means

- you must complete a flood risk assessment for development in this area
- you should follow the Environment Agency's standing advice for carrying out a flood risk assessment: www.gov.uk/guidance/flood-risk-assessment-standing-advice

Data in this summary

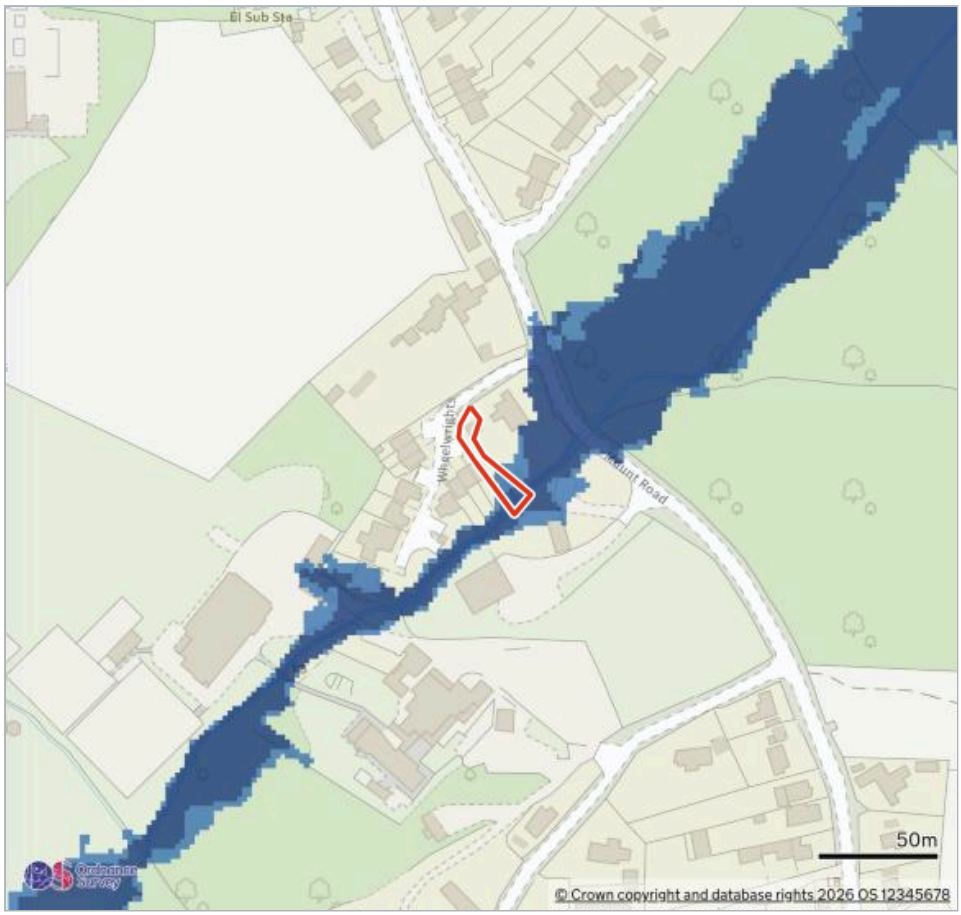

This summary includes flood zones, flood zones with climate change, surface water and surface water with climate change. Surface water is shown at a 1 in 100 chance.

At a glance for your site

Data	Result for your site
Flood zones	Flood zone 3
Flood zones with climate change	Flood zone 3
Surface water, present day	Some surface water at a 1 in 100 chance, mostly under 150mm deep
Surface water with climate change	Some surface water at a 1 in 100 chance, mostly under 300mm deep

Flood zones

Flood zones show the chance of flooding from rivers and the sea, ignoring flood defences. They are used to decide whether a flood risk assessment is needed.

Flood zones, present day

Key

- Flood zone 3
- Flood zone 2
- Flood zone 1
- Your site boundary
- Flood defence
- Main river
- Water storage area

Your reference	Location (easting/northing)	Scale	Created
Unspecified	**443574/161376**	**1:2,500**	**12 October 2026, 10:08**

Flood zone 3 has a 1% or greater chance each year of flooding from rivers, or a 0.5% or greater chance from the sea. Flood zone 2 has between a 0.1% and 1% chance from rivers, or between 0.1% and 0.5% from the sea.

Source: Environment Agency, National Flood Risk Assessment (NaFRA2). The data shown is correct on the date this summary was created.

Flood zones with climate change

How flood zones 2 and 3 could extend between 2070 and 2125, based on a central allowance for climate change.

Flood zones with climate change: 2070 to 2125

Key

- Flood zone 3
- Flood zone 2
- Extra area with climate change
- Your site boundary
- Flood defence
- Main river
- Water storage area

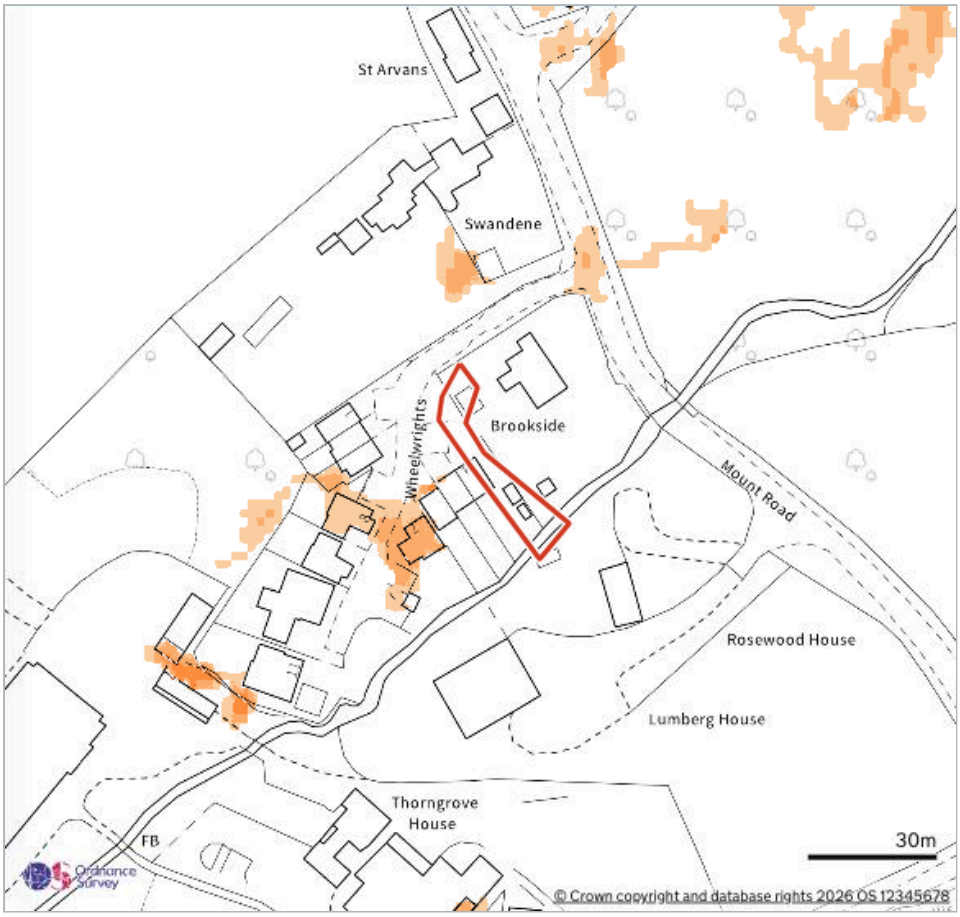

Your reference	Location (easting/northing)	Scale	Created
Unspecified	**443574/161376**	**1:2,500**	**12 October 2026, 10:08**

Use this alongside the present day flood zones to understand how flood risk could change over the lifetime of a development.

Source: Environment Agency, National Flood Risk Assessment (NaFRA2).

Surface water, present day

Surface water flooding happens when heavy rain cannot drain away. It is not part of the flood zones, so it does not change whether a flood risk assessment is needed, but you may need to consider it in one. The map shows areas with a 1 in 100 (1%) chance of flooding each year.

Surface water, present day: 1 in 100 (1%) chance each year, present day

Key

Surface water depth in millimetres

- Under 150
- 150 to 300
- 300 to 600
- 600 to 900
- 900 to 1,200
- 1,200 to 2,300
- Over 2,300

- Flood defence
- Main river
- Water storage area

- Your site boundary

Your reference	Location (easting/northing)	Scale	Created
Unspecified	**443574/161376**	**1:1,500**	**12 October 2026, 10:08**

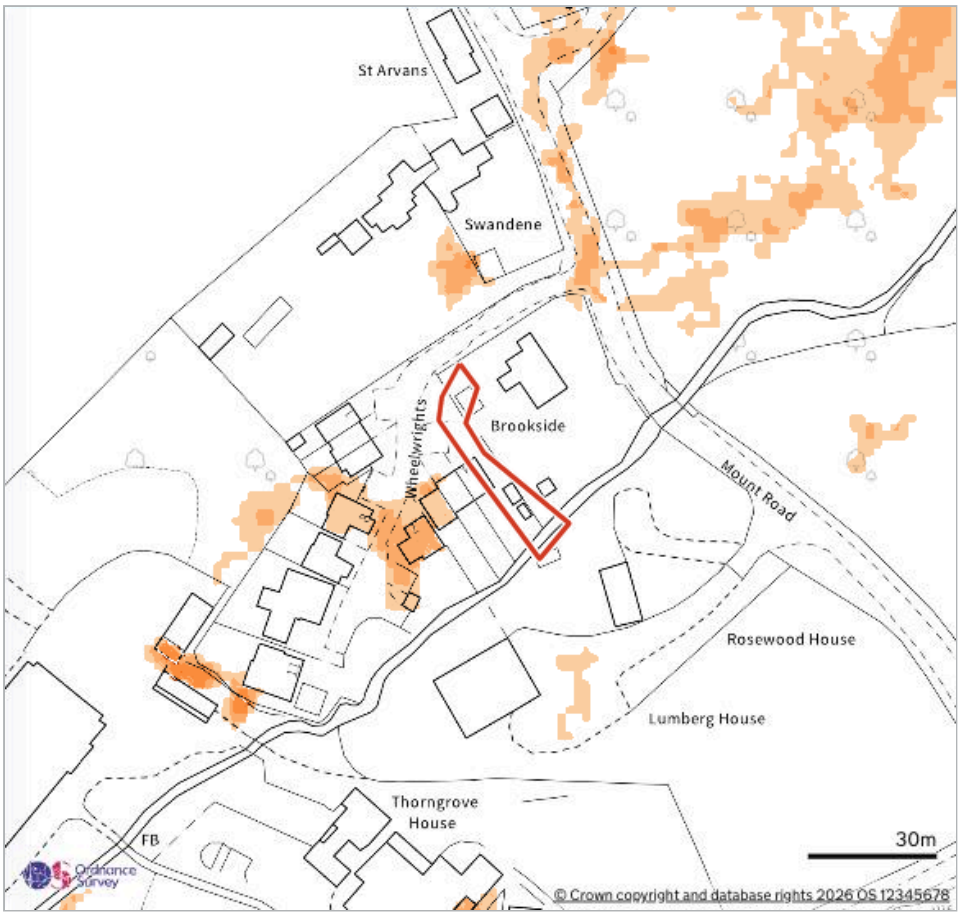

The map shows the area that could flood from surface water with a 1 in 100 chance each year, and how deep the water could be. You can also include maps

for a 1 in 30 and 1 in 1000 chance.

Source: Environment Agency, National Flood Risk Assessment (NaFRA2), risk of flooding from surface water.

Surface water with climate change

How surface water flooding with a 1 in 100 (1%) chance each year could change between 2061 and 2125, based on a central allowance for climate change.

Surface water with climate change: 1 in 100 (1%) chance each year, 2061 to 2125

Key

Surface water depth in millimetres

- Under 150
- 150 to 300
- 300 to 600
- 600 to 900
- 900 to 1,200
- 1,200 to 2,300
- Over 2,300

- Flood defence
- Main river
- Water storage area

- Your site boundary

Your reference	Location (easting/northing)	Scale	Created
Unspecified	**443574/161376**	**1:1,500**	**12 October 2026, 10:08**
